<u>How to Enable Windows .HLP Files</u>
<u>(Hypertext Handbooks use Windows .HLP Files)</u>

Hypertext Handbooks are delivered in a .HLP file format. Hypertext Handbooks will not work in Vista, 7 and 8, the Windows Help files (*.HLP*) unless you download the Windows Help feature. To do this, use the following instructions. You will need Windows administrative rights some of the steps.

1) Double-click on any *.HLP* file (or otherwise try to access it, e.g., accessing handbooks inside WinWam) and you will get a screen with the heading "*Why Can't I Get Help From This Program ?*". Then, click on the link to Microsoft Help and Support website.

2) Look under '*Resolution*' to find links for all versions of Windows. Click on the link for Windows Vista, 7 or 8.

3) Once you are taken to the proper download center, click on the green '*Continue*' button.

4) Then, to load the Genuine Windows Validation Component, right-click on the yellow bar with the blue ? at the top of the browser and choose '*Install This Add-On*'.

5) When the load of the Genuine Windows Validation Component is complete, you will see two red '*Download*' buttons. Click on the red '*Download*' button by '*x64*'.

6) Respond '*Open*', '*Allow*', '*Yes*', '*Yes*', and '*I Accept*'.

7) When the Windows Help download is complete, click the '*Close*' button.

8) Now you should be able to double-click on any *.HLP* file or otherwise access an *.HLP* file successfully.
